

Using the Leap Marketplace Submission Form

The **Leap Submission** form is used to submit content to HCL's Leap Marketplace and results in a page that looks very much like the example shown here.

Two key points to understand before you begin:

1. Each submission should include a downloadable file which will be available to users at no cost.
2. All pages will follow a standardized format.

The submission form collects all the information needed not only for your tile's content, but also for Marketplace filtering, search, and more. These instructions explain every field on the form and provide examples showing where particular content appears on the page.

In the provided screenshots, numbers and letters have been used to make it easier to understand where content appears (and whether or not it is visible). **Red numbers** are used for visible content, and **blue letters** are used for non-visible content.

Once you have submitted the form, it will go through a brief review and approval process prior to going live on the Leap Marketplace site. Please allow a few days to complete this process.

Getting started

A - The **Dashboard** button takes you away from this form to a dashboard where you can view all of your HCL Marketplace entries, including content for any of the Marketplaces: DX, Domino, Leap, and AppScan. Note that the form you are filling out will not appear in the Dashboard until it has been submitted (and you will probably lose your work if you try to leave and come back)..

The Marketplace Tile

Shown here, the Marketplace tile is how users first discover your submission. Further down this page is a screenshot of the related input fields.

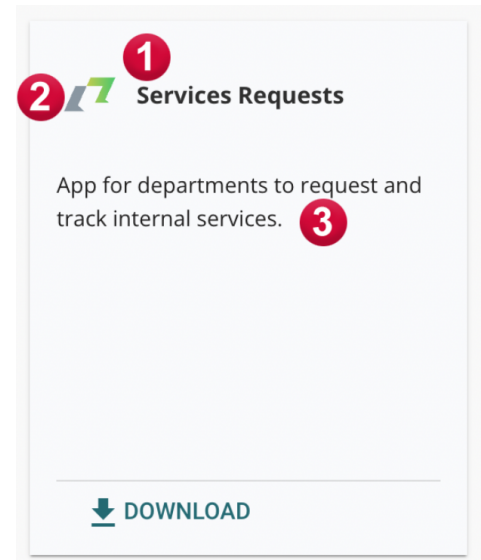

1 - Marketplace Entry Title. As the name suggests, this is the title on the tile, *Services Requests* in the example shown here. Keep the name relatively short. Note that this name is also used as the title of the details page inside the tile.

2 - Icon for the Tile. Each tile has a square icon. It can be in .png, .jpg, .gif, or .svg file format. It should be square, of course, and is typically a logo because it is, after all, relatively small. This image is also used on the detail page inside your tile.

3 - Short Description. The paragraph of text which appears on the tile. This is limited to a maximum of 195 characters, including spaces and punctuation. It should provide enough information for users to get a sense for what your entry includes.

B - Tile Preview. As you enter content into this section, you will see it appear in the tile preview, to give you an idea of how it will look in its final state.

4 - Extension File. This is the file that will be downloaded by interested users. If your solution requires multiple files, combine them into a single ZIP file.

The Marketplace Details Page

The Marketplace Details page is what users see once they've opened your tile. An image of the full page is shown at the top of these instructions and also on the next page with numbers corresponding to the inputs for your reference.

5 - Extension Version. What version of your solution is this?

6 - Overview Description. This is the first and most important section of your Marketplace page. Describe the solution and what problems it addresses. You may include multiple paragraphs.

7 - Required Products including versions List any required products/versions. Separate multiple entries with commas.

8 - Extension Release Date. Choose the release date for this version of the solution.

9 - Author. Enter the name of the person or team who authored your solution.

10 - Features. This is typically presented on the page as a bulleted list. If you could only point out 3 to 6 key points users should know about your solution, what would they be?

11 - Instructions for Use. Enter any instructions users would need for setup and/or use of your solution. If you have an outside site where detailed instructions can be found, include the URL.

12 - License Type. If your solution is offered with a license other than Apache 2.0, enter the name and a URL where it can be found. If Apache 2.0, choose that.

Services Requests

Download Extension

Version: v9.3.2

The app allows teams to fill out requests for various types of marketing services. Requests are submitted and then received by the marketing department where an assignment is made as to who is working on it, a priority set, and a determination is made on whether the request has enough information to start execution. The workflow allows the requestor to track the progress and approve the completed project.

Requirements

HCL Leap 9.3.2 or later

13 - Extension Type. Use this to classify your extension and for use in view filtering. Select all that apply.

Image Gallery & Support

Although not required, we highly recommend including screenshots of your solution.

14 - Image Gallery. Select up to 12 images to be presented in a gallery like that shown above. Your images should be of a similar size and shape to one another (they do not have to be exactly the same). We do not recommend mixing horizontal and vertical images.

15 - Support. Where should users go when they have questions about or problems with your solution? Include contact information, web forums, links to documentation, etc.
